Introduction

Since 1992, the North American Coordinating Council on Japanese Library Resources (NCC) helped to build a national collection of Japanese research materials in the United States through its Multi-Volume Sets Project (MVS) with funding provided by the Japan-United States Friendship Commission (JUSFC) and supplemental support from Japan Publications Trading Company, Ltd. (JPT). NCC provided grants for the purchase of expensive multi-volume sets of Japanese language materials, primarily in print, with consideration to each applicant institution’s 1) areas of specialization, 2) research and teaching needs, and 3) readiness to freely share the funded sets locally and nationally.

Funding for MVS was suspended in 2018 so that NCC could update and align its mission to fit the evolving technologies and 21st century needs of the field. NCC has formed a task force to help transition toward a comprehensive digitization and discovery grant program to replace the MVS Project. The purpose of this poster is to introduce an overview of the new digitization/discovery grant program that is in development and obtain feedback on it.

Digitalization/Discovery Grant Task Force members:
Regan Murphy Kao, Stanford University (Chair)
Toshi Marra, University of California, Berkeley
Hiroko Nakamura, Yale University
Natsuko Naguchi, Princeton University

New Grant Program in Development

Goals:
- Bring to light hidden, academically useful Japan-related materials through digitization
- Enable more robust use of these items
- Promote collaboration nationally and internationally
- Foster training in developing digitization projects
- Help to build an international infrastructure for digitized Japan-related materials

Criteria for evaluating applications:
- Demonstrates how digitized materials will benefit the national and international scholarly community of Japanese Studies
- Provides robust and comprehensive plan for digitization, discovery and promotion
- Ensures open access to the digitized materials
- Demonstrates how the resources will be used in Japan-related courses and otherwise engage the next generation of scholars
- Describes how the digital surrogates will be maintained for long-term availability and discoverability
- Promotes collaboration across complementary collections at institutions in the US and Japan

Grant application should include:
- Description of material to be digitized
- Narrative on value and academic significance of the proposed project (potential use, noting related digital collections and collaborating institutions, if applicable)
- Principal investigators (librarians or scholars partnering with a library) and list of other individuals and institutions
- Timeline (brief funding for one- or two-year projects with proof of progress each year)
- Expected deliverables, including digital surrogates and metadata
- Technical plan (tools, systems, standards, and technologies employed)
- Digital preservation and discoverability plan (must be available to anyone worldwide)
- Outreach plan for promoting the digitized materials
- Budget details (such as digitization, metadata creation, promotion costs within a range of approximately $1,000-$15,000; this may include an argument for acquiring material to be digitized)

Supplemental material may include:
- Any training or internship plans
- Any extra features of digital projects (e.g., transcription and translation)
- Any future development plans

Pilot Projects

In recent years, with the support of JASJC and JPT, NCC has funded the following four projects involving digitization as pilot cases.

Pilot Case 1: Princeton University Library purchased and digitized:
Shūen Ōsaka, Shūen unjō no kirara 経手豊かなる光のしつけ
A set of 10 volumes in 13. Booklabeled (published 1235) a commentary on canonical prose works, used widely as a textbook in medieval Japan. Written by Ōsaka Seizan 高山寺法, who was a Rinzai monk active in Kyoto and Kamakura. Published by a Kyoto book merchant, Chōji wooden typeface Nagaya printing. The 470 manuscripts are shown in many pages which testify to its role in the popuilation of classical learning.
Access: In Princeton University Library’s Catalog
Funded Year: 2014-2015

Pilot Case 2: Yale University Library purchased and digitized:
Jūjun tenkōban 十晩花月帖: The original manuscript of Jūjun kōnin (1287), as well as the 1480 woodblock print edition of the same title. It is a collection of notes from a trip, including poetry and paintings of places in Kyoto, as well as on the route from Hiroshima to Kyoto, by Rō Kyōka 幹行観 (1262-1321), who was a prominent Japanese poet, historian, and artist in the late 13th century. The discovery of this original work was major news among early-modern scholars of Japanese Studies. Yale University was able to acquire the manuscript and print edition successfully through a generous NCC grant and digitized them to ensure their discoverability and accessibility.
Access: In Yale University Beinecke Rare Book & Manuscript Library’s Digital Collection
Funded Year: 2015-2016

Pilot Case 3: University of California, Berkeley C. V. Starr East Asian Library digitized own holding of: Kadoshô 変身曼荼羅: Consists of 146 volumes (ca. 3,600 leaves) of hand-written manuscripts produced in the 10th century in Japan. Contains genealogies and linguistic materials for over 1,200 individuals from some 34 aristocratic families up to the 10th century, including birth and death dates, marriages, official ranks and promotions.
Access: In HathiTrust (PDF files downloadable) and in “Japanese Special Collections in the C. V. Starr East Asian Library, University of California, Berkeley” digital projects portal
Funded Year: 2017-2018

Pilot Case 4: University of Illinois Urbana-Champaign Library will digitize own holding of: Nairo no makimono 奈良の手箋: A scroll of 17 leaves, illustrated manuscripts produced in Bizen Province using bright colors. A 16th century vernacular tale about the origins of Mount Hiro. One of rare items of Yamazakura Collection, originally assembled by Joseph E. Yamazakura (1866-1938).
Access: In progress
Funded Year: 2018-2019

NCC’s Future Plan

We anticipate the following steps for implementing the proposed new funding program for digitization/discovery:

2019 Jan-Apr: Digitization/Discovery Grant Task Force collects feedback from the community through surveys, etc.
2019 May: Collected data is evaluated and recommendation is composed
2019 June-Nov: NCC seeks funding to implement digitization/discovery program
2020: New digitization/discovery program begins (if funding is secured)

Imagine the possibilities!

The task force would like to hear your comments on these pilot cases and solicit innovative suggestions for future funding possibilities that meet the criteria listed above. Talk with the task force members to discuss your ideas!

How you can help:
Make sure to participate in the NCC survey on the New Digitization/Discovery Grant Program by April 10 by visiting https://sisedx.nccjapan.org/ncc/new_grant_program/
Or submit the paper survey available at this session and throughout the conference.

We seek your participation in developing a global collection of Japanese research materials in digital form! If you wish to get involved with this new initiative, please contact any of the Digitization/Discovery Grant Task Force members.
